

FACILITY STOREROOM MANAGEMENT (FSM) by TraxMRO

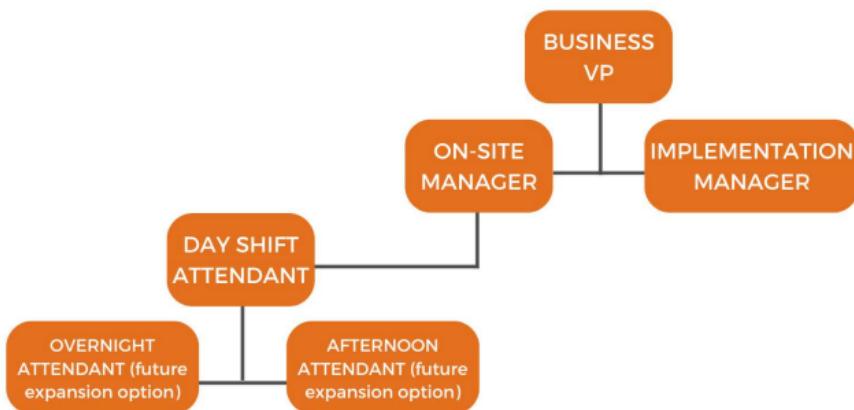

HAVE YOU CONSIDERED THE COST OF UNPLANNED DOWNTIME?

We understand large, complex operations and the challenges you face managing critical maintenance, repair, and operating (MRO) inventory. Limiting resources, difficult purchasing processes, restricted visibility to on-hand inventory, and a lack of inventory expertise make it hard to ensure your plant has the right products, in the right place, at the right time.

TAKE CONTROL OF YOUR STOCKROOM

- Dedicated resource(s) free your employee time to increase productivity
- Streamlined processes reduce your handling costs
- On-site expertise recommends stocking levels and driving product standardization
- Access to off-site inventory analysts that can provide guidance to you on setup within your ERP

HOW IT WORKS

Our Implementation Management Team will first work with you to schedule our lean operational sponsored walk-through. We'll identify key areas that you want to address so we can provide actionable data illustrating the value TraxMRO in-plant offering is providing to your facility. The Implementation Team will hire the on-site manager as well as the shift attendants that will be located at your facility to execute on streamlining your supply chain and delivering on the agreed upon return on investment for you.

By combining the TraxMRO in-plant option will provide you visibility, control, and actionable data for cost reductions and minimal unplanned downtime.

TraxMRO's Facility Storeroom Management provides a dedicated, experienced resource on a daily basis to not only support your SMC product purchases, but also all purchases from other suppliers.
