EVENT AGENDA

FactoryTalk Optix
OUT-OF-THE-BOX WORKSHOP

Day 1 -Basic

- **Streamline HMI Design:** Discover how reusable code, pre-built tools, localization, data logging, styling, collaboration, web-based features, and version control can accelerate your HMI Process.
- **Build Future-Ready HMIs:** Learn to create versatile and adaptable solutions supporting diverse hardware and customer needs through open standards.
- **Optimize Price & Functionality:** Explore hardware choices and modular licensing to effectively manage cost and get the features you require.

Day 2 -Advanced

- **Advanced Visualization & UI:** Explore reusable object visualization, loaders, and layouts by building widgets, aliases, dialogs, and a sample calculator app.
- **Data Handling & Context:** Learn to contextualize DataLogger, EventLogger, and database querying, including a dialog review audit of Eventloger.
- **Connectivity with OPC US & MQTT:** Understand OP US server/client communication and MQTT broker/client interactions for external UI content and subscription.
