## SOFTWARE EVOLUTION

Things have changed. The arrival of the Internet of Things (IoT) and Industry 4.0 required a shift in the way software is developed and deployed. Now, more than ever, flexibility and agility are the keys to success. Demand for subscription-based software in commercial and industrial markets has accelerated; and, the pace of this change is not expected to slow down. We're embracing the change and are here to help usher you into this new way of doing business.

It can be a daunting task to justify the purchase of software to get your job done. Don't worry, help has arrived! Join us and get the understanding of the current & future state of Software offerings. Get updates on software offerings through the MyRockwell portal. Review the differences between perpetual, subscription, and SaaS (Software as a Service).

Explain the Toolkit migration process.
